Executive Summary

This report presents an end-to-end analysis of customer product adoption, product usage, engagement, retention, churn and customer lifetime value (CLV) within a fintech environment. The objective is to move beyond basic transaction reporting and understand how customers interact with products, which products and features generate sustained engagement, and whether deeper product adoption is associated with stronger customer value and retention.

The analytical process was divided into two major layers. SQL was used to clean, transform and aggregate the underlying relational data into Power BI-ready analytical tables. Power BI was then used to develop an interactive reporting environment covering executive performance, product utilization, Moniebook adoption, customer segmentation, retention and churn, CLV, regional performance, feature stickiness and the customer adoption funnel.

A central focus of the analysis is Moniebook adoption. Rather than evaluating Moniebook simply as an individual product, the project examines whether its adoption is associated with broader customer engagement, multi-product usage, retention and customer lifetime value.

The resulting dashboard is therefore designed as a decision-support tool. It enables management and product teams to identify adoption gaps, understand customer segments, identify potential churn risks, locate regional opportunities, investigate product friction and prioritize customers with high commercial value.

Business Problem

Fintech businesses typically collect large volumes of customer, transaction, product and engagement data. However, having large amounts of data does not automatically provide an understanding of customer behavior.

A major business challenge is determining what drives sustained customer usage and business value.

Business Challenge	Why it matters
Which products have the highest customer adoption?	Identifies the products with the strongest market penetration and helps prioritize successful products.
Which products generate the greatest frequency of usage?	Shows which products drive repeated customer engagement and may contribute most to customer stickiness.
Which features encourage repeated engagement?	Helps the product team identify features that keep customers returning and can inform product development and onboarding.
How quickly do customers adopt Moniebook after registration?	Measures the effectiveness of the adoption journey and helps identify opportunities to improve onboarding.
Which customer segments are most likely to adopt Moniebook?	Helps target Moniebook campaigns toward customer groups with the strongest adoption potential.
Do Moniebook users demonstrate stronger engagement than non-users?	Helps determine whether Moniebook adoption is associated with deeper customer engagement
Are customers using multiple products more likely to remain active?	Helps assess whether broader product adoption is associated with stronger retention and customer stickiness.

Does greater engagement correspond with higher CLV?	Determines whether highly engaged customers generate greater long-term business value.
Which customer segments and regions have high value but weak adoption?	Identifies high-value growth opportunities where targeted adoption or cross-selling campaigns may be effective.
Which customers show characteristics associated with potential churn?	Enables customer-success teams to identify at-risk customers and prioritize retention efforts.
At what point in the customer journey do users drop off?	Identifies weaknesses in the customer funnel, allowing the business to improve activation, product usage and retention.

Overall this project explains how product usage and adoption, influence customer retention, churn, and lifetime value?

The project therefore addresses the need for a unified customer adoption and stickiness framework that connects product behavior with customer retention and financial value.

Project Objectives

Objectives	Description
Measure Product Adoption	Determine how widely each product is used and compare products based on unique users, usage events and sessions.
Analyze Moniebook Adoption	Measure Moniebook adoption, adoption speed, adoption trends and differences across customer segments, industries, business sizes and regions.
Evaluate Customer Stickiness	Assess whether customers with greater product and feature engagement demonstrate stronger retention characteristics.
Connect Engagement to Customer Value	Examine relationships between product usage, transaction activity, engagement and customer lifetime value.
Identify Churn and Retention Risks	Identify customers and segments showing characteristics associated with inactivity or churn, including low login activity, high support interactions, failed transactions and lower satisfaction
Support Business Decision-Making	Translate the analysis into an interactive Power BI dashboard that allows executives, product teams, sales teams and customer success teams to investigate performance from different perspectives.

Dataset Overview

The project uses a synthetic fintech dataset representing customer activity across a two-year period from January 2024 through December 2025. The dataset contains more than 50,000 records and is organized into relational datasets representing different aspects of customer behavior.

The major data domains include:

Dataset	Purpose
Customers	Customer demographics, business information and segmentation
Products	Products available to customers
Feature Usage	Product and feature-level usage behavior

Transactions	Customer transaction activity and outcomes
Engagement	Login, session and engagement behavior
Customer Metrics	Aggregated customer-level measures including CLV and churn-related indicators

The relational structure allows customer activity to be analyzed across multiple dimensions rather than treating each transaction as an isolated event.

The main customer-level analytical table, pbi_customer_360, provides a consolidated view of each customer and includes measures such as:

1. Customer segment
2. Industry
3. Business type
4. State and city
5. Acquisition channel
6. Products used
7. Moniebook adoption status
8. Transaction value
9. Profit
10. CLV
11. Login activity
12. Satisfaction
13. Support tickets
14. Failed transactions
15. Churn status

Data Preparation Summary

Data preparation was performed before the Power BI visualization layer was developed.

The primary objective was to ensure that the data was reliable, consistently structured and suitable for aggregation.

The preparation process included:

Data Structure Validation

The underlying relational tables were reviewed to ensure that customer, product, transaction, engagement and feature records could be linked through appropriate identifiers

Data Type Validation

Key fields were assigned appropriate data types:

1. Customer_ID - text
2. Dates - date
3. Transaction values - decimal
4. Counts - whole numbers
5. Adoption indicators - integer
6. Rates - decimal percentages

Aggregations	Description
Customer-Level Aggregation	Customer-level metrics were consolidated into pbi_customer_360. This prevents customer-level measures such as CLV, total transaction value and total profit from being repeatedly counted when transactional records are analyzed.

Product Aggregation	Product-level metrics were summarized in powerbi_product_summary, allowing Power BI visuals to analyze products without repeatedly querying raw transaction-level data.
Monthly Aggregation	Monthly revenue, profit, transactions and adoption trends were prepared in powerbi_monthly_trends.
Adoption Aggregation	Moniebook adoption was transformed into an adoption curve through powerbi_moniebook_adoption_curve.
Segment and Regional Aggregation	Customer segments and states were summarized into dedicated analytical tables to support faster and more reliable dashboard analysis.
Feature Aggregation	Feature-level usage, sessions, adoption and failed transactions were summarized in powerbi_feature_summary.
Churn-Risk Preparation	Customer-level indicators relevant to potential churn were prepared in powerbi_churn_risk_table.

Analytics Layer and SQL Modeling

SQL was used as the primary analytical transformation layer between the raw relational datasets and Power BI.

Instead of connecting Power BI directly to every transactional table, the analysis creates purpose-built analytical outputs at the appropriate grain.

The major analytical tables include:

Tables	Grain	Description
`pbi_customer_360`	One row per customer.	This is the primary customer analytics table and contains customer-level adoption, engagement, financial and churn metrics.
`powerbi_product_summary`	One row per product.	Used to compare product users, usage events, sessions, feature adoption and failed transactions.
`powerbi_monthly_trends`	One row per month.	Used for time-series analysis of revenue, profit, transactions and adoption.
`powerbi_moniebook_adoption_curve`	One row per adoption month	Used to track new and cumulative Moniebook adoption.
`powerbi_segment_summary`	One row per customer segment	Used to compare customer volume, value, adoption and churn characteristics across segments
`powerbi_state_summary`	One row per state.	Used for geographic performance analysis.
`powerbi_feature_summary`	One row per product feature.	Used to measure feature adoption, usage, sessions and failed transactions.
`powerbi_funnel_summary`	One row per funnel stage	Used to analyze progression from registration through product usage and adoption.

`powerbi_churn_risk_table`	One row per customer.	Used to identify customers requiring potential retention intervention.

The modeling principle was to ensure that each Power BI visual starts from an analytical table with the correct grain. This reduces duplication risk and makes measures such as revenue, profit and CLV more reliable.

PowerBI Dashboard Overview

The Power BI dashboard converts the SQL analytics layer into an interactive business intelligence environment.

The dashboard is structured around the customer lifecycle and the relationship between adoption, engagement, retention and value.

The main reporting areas are:

1. Executive Overview
2. Product Utilization
3. Moniebook Adoption
4. Customer Segmentation
5. Retention and Churn
6. CLV and Revenue Impact
7. Regional Performance
8. Feature Usage and Stickines

The Moniebook Adoption page serves as the central analytical page because it connects product adoption with customer engagement, retention and lifetime value.

Key Metrics Used

The dashboard uses several groups of business metrics.

Customer Metrics

- Total Customers
- Active Customers
- Churned Customers
- Retention Rate
- Churn Rate

Product Metrics

- Unique Users
- Usage Events
- Total Sessions
- Feature Adoption Rate
- Failed Feature Transactions

Moniebook Metrics

- Moniebook Users
- Moniebook Adoption Rate
- New Monthly Moniebook Users
- Cumulative Moniebook Users
- Average Days to Adopt

Financial Metrics

- Total Transaction Value
- Total Fees
- Total Profit
- Average Transaction Value
- Average CLV
- Median CLV

Engagement Metrics

- Total Logins
- Average Days Since Last Login
- Total Sessions
- Products Used
- Feature Usage

Customer Experience Metrics

- Average Satisfaction Score
- Support Tickets
- Failed Transactions

These metrics collectively provide a more complete view than revenue or transaction volume alone.

Findings

a. Product Usage Performance

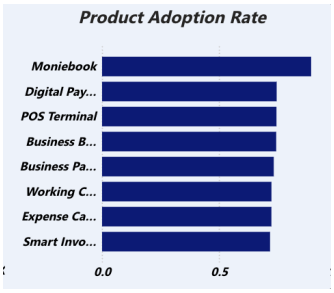

The Product Utilization examines how customers use the company's product portfolio across digital payments, POS terminals, business banking, Moniebook, working capital, expense cards, smart invoicing, and business payment products.
This section focuses on product usage volume, customer reach, engagement depth, adoption strength, and areas where product friction may exist. The analysis helps identify which products are driving customer activity, which products require improvement, and where the business may need stronger onboarding or product education.

Digital payment has the strongest customer reach and engagement. Digital payment appears to be the most widely used product based on the **Total Unique Users (5,485)**, **Total Sessions**, and **Total Usage Events**. It leads the product portfolio in customer reach and overall engagement, suggesting that digital payment services remain the core product customers interact with most frequently.

However, this is expected in fintech companies because payments are usually the entry point into the platform. Customers may first join the platform to process payments before adopting additional products such as POS, Mobile banking, Moniebook, e.t.c

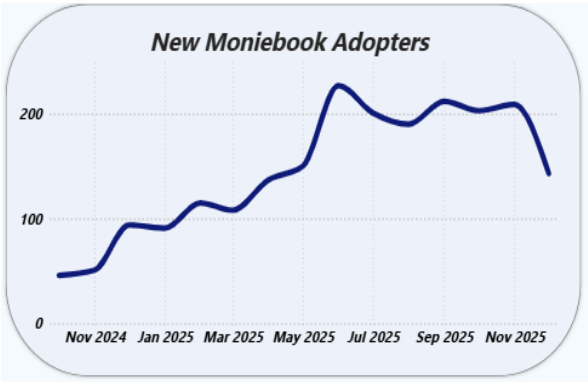

POS Terminal has high usage but also records the highest **failed transactions** of about 53,531. This suggests that while POS is important to customers, it may also be creating friction. The business should investigate POS failure rates by month, state, customer segment, and transaction type.

Moniebook has lower usage volume compared to Digital Payments and POS, but it shows a strong product adoption rate with about **89 out of every 100** show adoption behavior. This is a positive signal. It suggests that customers who

engage with Moniebook are more likely to adopt it meaningfully, even though overall awareness or reach may still be limited.

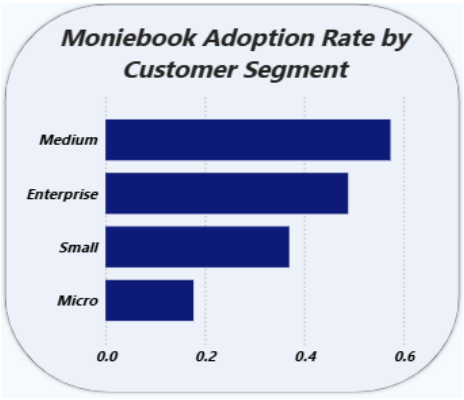

b. Moniebook Adoption

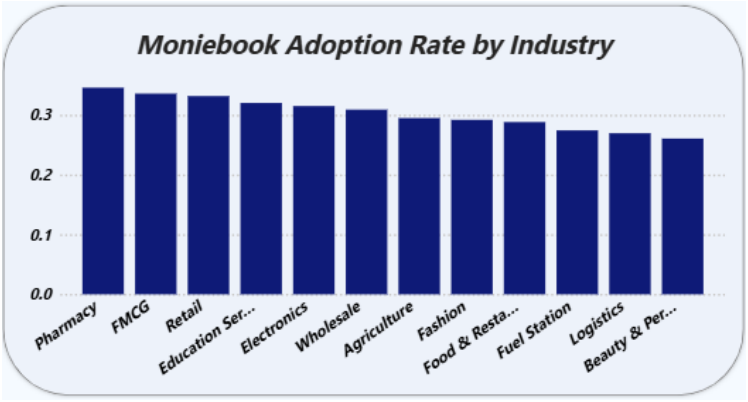

When Moniebook launched in late 2024, it started as a quiet experiment for a handful of merchants looking for a better way to keep their books in order. Over the past year, that quiet start built into genuine momentum. As of 2025, **2,177 businesses** have made Moniebook part of their day-to-day operations.

The real momentum kicked off in May 2025 and by mid-June, the platform gained serious traction welcoming well over 200 new business owners. While that initial surge leveled off toward the end of the year, the foundation is now firmly established.

Yet beneath these top-line figures lies an honest operational truth: **it takes an average of 220 days or over seven months for a business owner to fully adopt Moniebook.** Merchants aren't jumping in on day one; they are taking their time to build trust before trusting the tool with their finances.

57% of medium-sized enterprises and **49% of Enterprises** actively use Moniebook, finding that it solves their growing bookkeeping headaches.

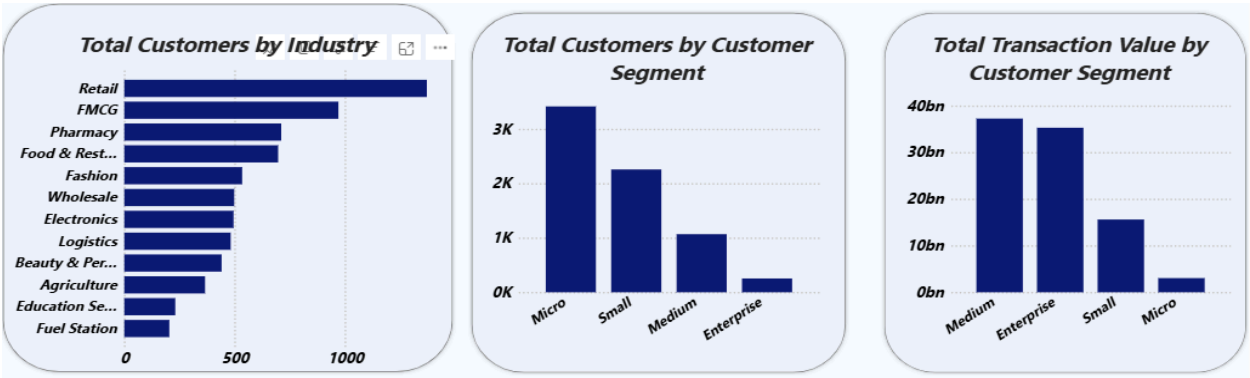

Only about **37% of small scale companies and 17% of micro shops** have come on board, signaling that the current setup may still feel a bit too complex or overwhelming for someone running a one-person show.

Pharmacies (35%), **fast-moving consumer goods vendors (34%)**, and **retailers (33%)** are the most enthusiastic adopters, while service-heavy businesses like **logistics** and **beauty and personal care saloons** are adopting at a slightly slower, steadier pace (around **26–27%**).

The takeaway is clear: mid-sized shops and pharmacies have embraced Moniebook as an indispensable tool. The next chapter is about meeting business owners earlier in their journey, cutting down that seven-month wait and making bookkeeping so simple that even the smallest neighborhood shop can benefit from day one.

c. Customer Segmentation Insights

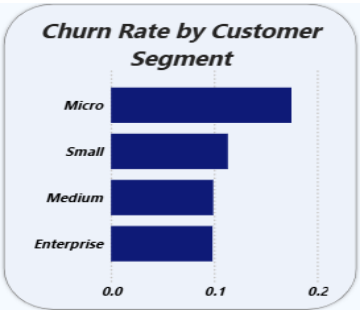

Every business has a heartbeat, and looking across our customer base reveals a fascinating story: while everyday neighborhood merchants make up our sheer numbers, it is the mid-sized and large enterprises that carry the financial weight of the platform.

Everyday commerce drives our community. **Retail** stands at the very front of the crowd with **1,371 businesses**, closely followed by fast-moving consumer goods (**FMCG**) at **970 merchants**. Essential daily stops like **Pharmacies (711)** and **Food & Restaurants (697)** form a strong second wave. While specialized services like **Agriculture (366)**, **Education (231)**, and **Fuel Stations (204)** have smaller headcounts, our platform remains deeply rooted in daily retail trading.

When looking at business scale, the pyramid is clear. **Micro-businesses** dominate the volume with over **3,418 sellers**, followed by **Small businesses** at roughly **2,259**. Meanwhile, **Medium businesses (1069)** and large **Enterprises (254)** make up a much smaller, exclusive circle. In short: the vast majority of our users are solo entrepreneurs and neighborhood shops.

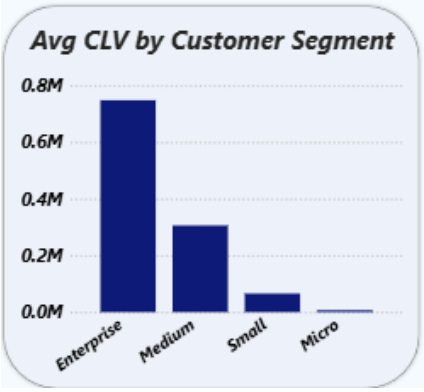

Despite being outnumbered, larger businesses move the bulk of the platform's money. **Medium businesses** lead all groups with a massive **37 billion**, with **Enterprise merchants** right behind at **35 billion**. Together, they drive over 70 billion in activity. In contrast, small businesses generate **15 billion** while **Micro-merchants** generate about **3 billion**, illustrating that high transaction volume is heavily concentrated at the top.

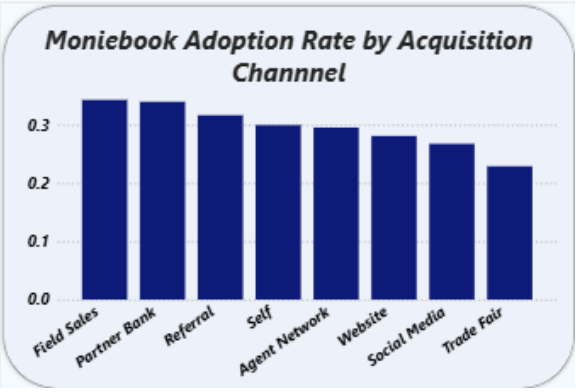

Stability grows with business size. **Enterprise** and **Medium** businesses show strong loyalty with the lowest drop-off rate at **10%**. **Small shops** follow closely at **11%**. However, **Micro-sellers** experience the most friction, with **17%** leaving the platform; a reminder that smaller vendors face higher business mortality and need simpler, more supportive experiences to stick around.

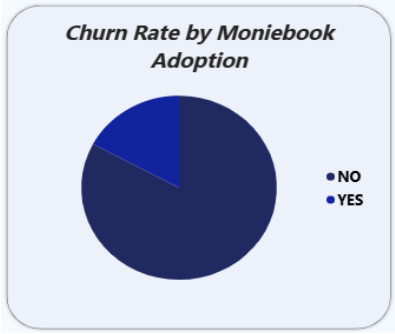

The cumulative lifetime value reflects this difference in staying power and transaction size. An average **Enterprise partner** contributes around **0.75M (750k)** in long-term platform value, while a **Medium business** contributes **0.30M (300k)**. For **Small (65k)** and **Micro (6k)** businesses, the per-merchant value is modest, meaning their true power lies in mass scale.

Human connection wins when it comes to getting merchants to adopt Moniebook. In-person channels lead adoption, with **Field Sales (34%)** and **Partner Banks (34%)** at the top, followed closely by word-of-mouth **Referrals (32%)**, **Self-onboarded users (30%)**, and **local Agent Networks (30%)**. Purely digital routes like **Websites (28%)** and **Social Media (27%)**, alongside **Trade Fairs (23%)**, see lower adoption, proving that a face-to-face handshake and direct guidance remain the most effective ways to introduce bookkeeping tools to business owners.

d. Retention and Church Insights

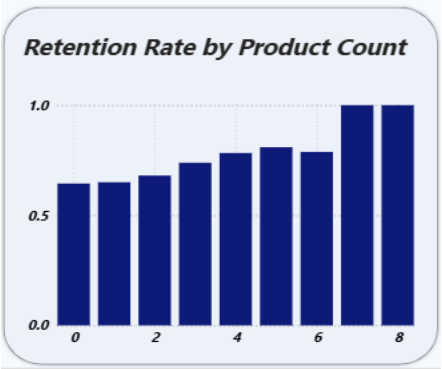

A merchant's daily habit tells the real story of platform loyalty. When business owners find tools that genuinely make their work easier, they keep coming back, integrate more of their daily routines, and stay for the long haul.

Adopting Moniebook acts as a powerful anchor for business retention. The vast majority of merchants who leave the platform (**NO** representing over **80%** of total churn) are those who never adopted Moniebook. In contrast, those who actively adopted the tool (**YES** around **17%**) are far less likely to walk away, proving that once bookkeeping is woven into a merchant's daily workflow, platform loyalty skyrockets.

Activity across the network remains substantial with over **435,000 total logins recorded**. On average, merchants check into the platform every **25 days**. This cadence reflects a regular monthly cycle for many shop owners such as month-end reconciliations or payroll, though bringing that check-in frequency closer to weekly or daily usage remains a strong growth opportunity.

The more tools a merchant uses, the harder it is to leave.

- Businesses using **0 to 2 products** start with a baseline retention rate around **64% to 68%**.
- As they adopt **3 to 6 products**, loyalty steadily climbs past **74% to 79%**.
- Once a merchant integrates **7 or 8 products**, retention reaches a perfect **100% (1.0)**.

The more features a business uses, the more essential the platform becomes to their daily routine.

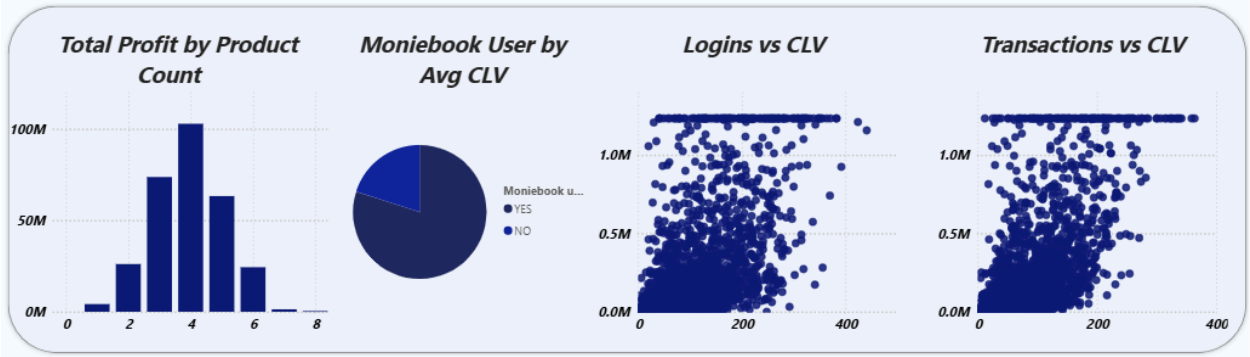

Across our entire base of roughly 7,000 customers, early warning signs often boil down to two quiet red flags: sudden inactivity and payment friction.

With **5,274 total support tickets** and over **34,000 failed transactions** recorded platform-wide, the churn risk table acts as an early radar. High-risk accounts are rarely just unhappy; they are often merchants who silently

stop logging in or those hitting repeated failed transactions. Identifying these operational pain points early allows the team to step in with proactive support before quiet frustration turns into lost merchants.

e. CLV and Revenue Impact

The true value of a platform is built on real daily engagement. When merchants actively use our tools, log in regularly, and run their day-to-day sales through the system, profitability grows naturally for both the business and the platform.

Adding products drives revenue, but there is a clear sweet spot. Merchants using **3 to 5 products** generate the overwhelming majority of our returns, with the **4-product group peaking at over 100M in total profit**. Businesses with only 1 or 2 products contribute very little, while those using 6 or more drop off simply because fewer businesses need that many specialized tools. Getting a merchant from two products to four is where the real value unlocks.

Adopting Moniebook significantly elevates a customer's long-term worth. While non-adopters make up the larger volume base, merchants using Moniebook command a notably higher average lifetime value. They stay longer, use more services, and generate steady, high-margin activity.

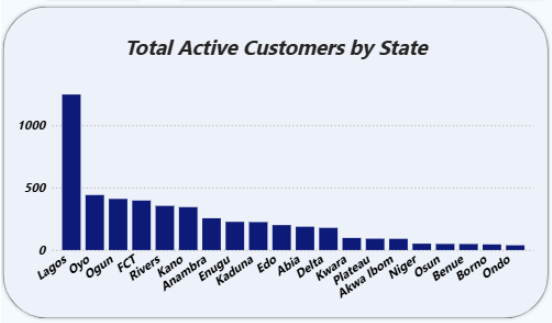

Consistent daily engagement directly drives long-term customer value, with merchants who log in between **100** to over **300 times** and process upwards of **100** to **250+ transactions** consistently reaching top-tier lifetime value above **1.0M**. Rather than occasional spikes in activity, regular operational habits build our most resilient and profitable accounts.

Across our entire network of roughly 7,000 customers, platform value is heavily anchored by key commercial hubs like Lagos, Abuja (FCT), Ondo, Niger, and Enugu.

Together, all merchants have generated over **661M in total customer lifetime value** and **296M in cumulative profit**. Our standout earners, led by top retail, beauty, and FMCG businesses generating between **1.5M and 3.39M in individual profit**, reaffirm that our most valuable accounts are active Moniebook users who rely on the platform to run their daily trade.

f. Regional Performance

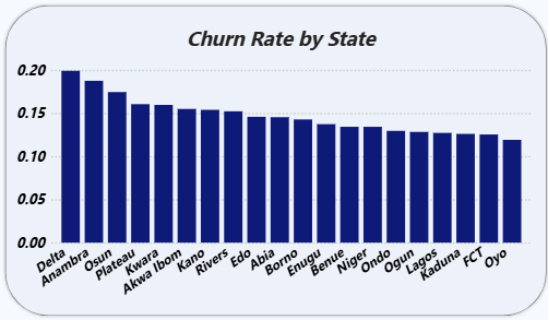

A look across the map reveals how local commerce shapes our platform. While Nigeria's bustling commercial capital anchors our active community, merchant loyalty and financial activity tell unique regional stories.

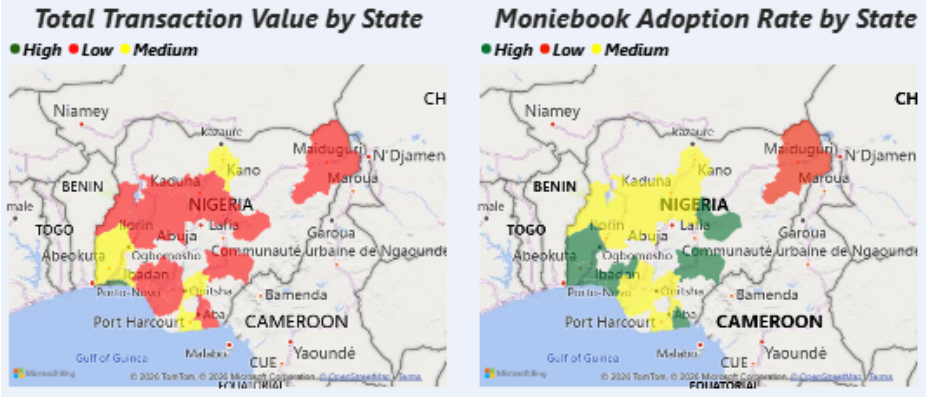

Lagos remains the heartbeat of our merchant community with over **1,200 active businesses**, standing as our largest stronghold by a wide margin. Fast-growing commercial hubs form a solid secondary layer, led by **Oyo (441)**, **Ogun (410)**,

the capital **FCT (397)**, **Rivers (354)**, and **Kano (344)**. Meanwhile, steady pockets of traders across the East, South-South, and North-Central such as **Anambra, Enugu, Kaduna, Edo, Abia, and Delta** show consistent daily engagement, while emerging markets like **Kwara, Plateau, Akwa Ibom, Niger, Osun, Benue, Borno, and Ondo** represent clear room for future expansion.

Merchant loyalty follows a distinct regional pattern, holding strongest in mature trading centers. **Oyo (12%)**, **FCT (13%)**, **Kaduna (13%)**, **Lagos (13%)**, and **Ogun (13%)** report the lowest churn rates, demonstrating that merchants in well-established business corridors integrate our tools smoothly into their everyday routines. Conversely, higher merchant turnover in **Delta (20%)**, **Anambra (19%)**, and **Osun (17%)** signals key regional friction points where hands-on merchant support and dedicated agent assistance are urgently needed to build lasting trust.

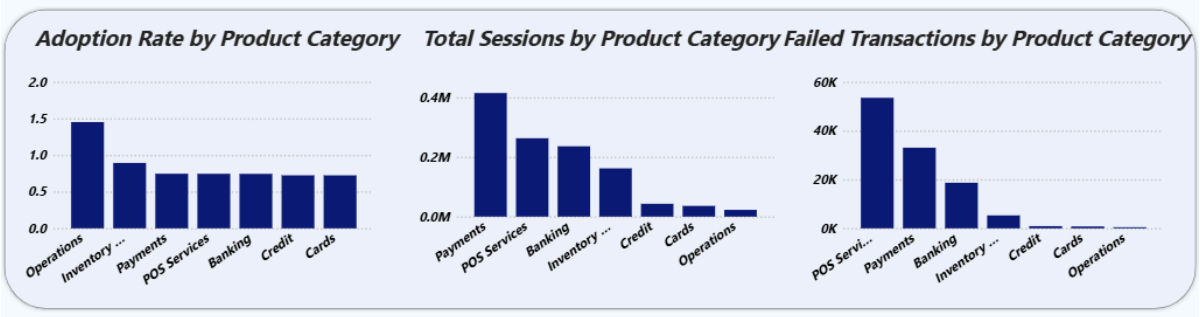

Across the nationwide map, customer density, total transaction value, and Moniebook adoption clearly align along Nigeria's major commerce arteries. Activity flows heavily from the South-West trading belt straight through to Abuja, Kano, and Borno in the North. Wherever our physical field presence and local agent relationships are most active, bookkeeping adoption naturally climbs, proving that strong, face-to-face regional grounding turns everyday neighborhood vendors into our most loyal, high-value partners.

g. Feature Usage and Stickiness

Every business owner runs on a daily rhythm: opening shops, ringing up sales, managing cash flow, and making sure suppliers and staff get paid. Looking across our product ecosystem reveals exactly where merchants spend their energy, which tools run their daily counters, and where operational bumps in the road cause real frustration.

When business owners discover operational and management features, they embrace them with strong

momentum . **Operations** leads the ecosystem with an adoption index of **1.45**, followed by **Inventory Management (0.89)**. Meanwhile, daily transactional categories like **Payments (0.75)**, **POS Services (0.75)**, **Banking (0.74)**, **Credit (0.72)**, and **Cards (0.72)** maintain steady, widespread uptake across the board, proving that merchants eagerly adopt tools that bring order to both the shop floor and the back office.

The daily hustle unfolds directly at checkout and the cash register. **Payments** dominates platform screen time with over **410,000 active sessions**, serving as the undisputed front door to daily trade, while **POS Services (~263,000 sessions)** and **Banking (~236,000 sessions)** follow as the second and third most frequented touchpoints. In contrast, specialized administrative tools like **Inventory (~162,000 sessions)**, **Credit (~43,000 sessions)**, **Cards (~36,000 sessions)**, and **Operations (~22,000 sessions)** see fewer, more deliberate check-ins, reflecting weekly routines rather than hourly transactions.

Payment friction at the counter remains the biggest operational pain point for shop owners. **POS Services** bears the brunt of merchant frustration with over **53,000 failed transactions**, while **Payments** logged roughly **33,000** and **Banking** recorded nearly **19,000**. Compared to negligible errors in Credit, Cards, and Operations, terminal and payment reliability is the single most critical area to fix to protect checkout speed and preserve hard-earned merchant trust.

Looking at individual tools, **Digital Payments** serves as the platform's primary entry point, engaging **5,485 unique merchants** across **415,465 sessions** and **88,656 usage events** with a solid **75% adoption rate**. Countertop and banking essentials closely support this volume: **POS Terminal** powers **3,574 merchants** over **263,513 sessions** with also a **75% adoption rate**, while **Business Banking** handles **3,194 users** across **236,422 sessions** (**74% adoption rate**). Meanwhile, **Moniebook** leads all tools in adoption depth at **89%**, managing **2,186 users** across **162,212 sessions**. Specialized tools effectively round out the suite ranging from **Working Capital Loans (824 users; 43,114 sessions)** and **Expense Cards (671 users; 36,081 sessions)** to back-office helpers like **Smart Invoicing (535 users)** and **Business Payroll (316 users)** all maintaining strong adoption rates above **72%**

In total, the platform has powered nearly **1.18 million sessions** and **238,680 individual usage events** across more than **16,700 product touchpoints**. Transactional workflows generate the bulk of daily activity led by **Payments** with nearly **90,000 usage events**, followed by **POS Services (~55,000)** and **Banking (~50,000)** while niche operational tools provide the deep utility that keeps merchants grounded on the platform long term.

Product Category	Product Name	Unique Users	Usage Events	Total Sessions	Feature Adoption Rate
Payments	Digital Payments	5485	88656	415465	0.75
POS Services	POS Terminal	3574	56343	263513	0.75
Banking	Business Banking	3194	50622	236422	0.74
Inventory Management	Moniebook	2186	21341	162212	0.89
Credit	Working Capital Loan	824	9216	43114	0.72
Cards	Expense Cards	671	7679	36081	0.72
Operations	Smart Invoicing	535	2424	11347	0.72
Operations	Business Payroll	316	2399	11392	0.73
Total		16785	238680	1179546	6.03

Key Business Insights

1. The Heavyweights Carry the Financial Load: While thousands of solo vendors and micro-shops fill our platform with vibrant everyday energy, it is the mid-sized and large enterprises that quietly fuel the platform's financial engine. A small circle of just over 1,300 medium and enterprise businesses generates more than 72 billion in transactions and brings in the highest individual lifetime value, proving that organizational scale drives our bottom line.

2. Every Added Tool Deepens Merchant Loyalty: A shop owner's loyalty grows with every operational habit they move onto the platform. Merchants juggling only one or two products frequently drift away, but as they merge three to six tools into their daily routine, retention steadily climbs reaching a perfect 100% once they rely on seven or eight products to run their business.

3. The "Four-Product Sweet Spot" Unlocks Peak Profit: There is a clear turning point where a merchant relationship transitions from break-even to highly profitable. Total platform profit peaks dramatically among businesses utilizing four products, generating over 100M in returns. Guiding a business owner past the initial payment tools and into four integrated solutions is our highest-impact growth lever.

4. Moniebook Acts as the Ultimate Platform Anchor: Once a business owner trusts the platform with their books, they almost never leave. Moniebook adopters make up only a tiny sliver of total churn, with over 80% of lost merchants coming from those who never adopted the bookkeeping tool. Turning shop owners into active Moniebook users serves as our strongest defense against customer drop-off.

5. Countertop Friction Strains Merchant Trust: Nothing tests a shopkeeper's patience like a payment failing while a customer waits at the checkout counter. With over 53,000 failed transactions on POS terminals alone, countertop reliability is our most urgent operational challenge. Resolving terminal drop-offs and transaction errors directly protects the daily trust we have built with store owners.

6. The Long 220-Day Wait to Organize the Books: Business owners love Moniebook once they begin using it, boasting an exceptional 89% adoption depth, but it currently takes them over seven months to take that first step. Solo and micro-vendors especially feel the tool is too complex for a one-person show, leaving a major opportunity to simplify onboarding and deliver bookkeeping value within their first month.

7. Human Handshakes Outperform Digital Screens: In an increasingly digital world, trust in business finance is still built through human connection. High-touch routes like field sales agents, partner banks, and word-of-mouth referrals drive our highest adoption and lowest regional churn across core commercial hubs, proving that face-to-face guidance remains the most reliable way to onboard lasting merchants.

Recommendations

1. Introduce Moniebook in the First Thirty Days Merchants currently spend an average of over seven months building trust before touching our bookkeeping tool, even though those who use it almost never leave. We cannot afford to wait 220 days for business owners to stumble upon Moniebook. Introducing interactive setup guides, live onboarding sessions, and early-usage incentives during a merchant's very first month will bridge the gap between initial signup and daily bookkeeping habits.

2. Guide Every Merchant to the Four-Product Sweet Spot A merchant using one or two tools contributes very little, but once they reach four integrated products, profitability surges past the 100M milestone. We need to create intuitive, bundled product packages, such as pairing Payments and POS with Banking and Moniebook so business owners naturally transition from basic payment processing to full platform immersion.

3. Eliminate the Frustration of Countertop POS Failures Nothing breaks a merchant's trust faster than a payment declining while an impatient customer waits in line. With more than 53,000 failed POS transactions recorded, resolving terminal connectivity, hardware issues, and network routing must become an urgent operational priority to protect daily checkout confidence.

4. Build a Lightweight "Moniebook Lite" for Solo Vendors With only 17% of micro-merchants adopting Moniebook, our current setup feels too complex for solo operators running neighborhood stalls. Building a simplified, single-tap cash-in and cash-out tool will remove interface intimidation and bring thousands of everyday vendors into the bookkeeping ecosystem.

5. Intervene Before Silent Disengagement Turns into Churn Merchants rarely leave in anger; they simply stop logging in after hitting operational walls like repeated failed transactions. Tracking login gaps and error spikes allows our support team to step in proactively with direct assistance before a quiet merchant decides to walk away.

6. Double Down on Field Sales and Human Connections In-person handshakes from field agents and partner banks deliver our highest adoption rates at 34%, easily outperforming online ads and trade fairs. Reallocating marketing budgets toward boots-on-the-ground field teams will build the authentic, face-to-face trust required to onboard lasting business owners.

7. Turn Satisfied Shopkeepers into Brand Advocates Word-of-mouth referrals drive 32% of our tool adoption, proving that business owners listen closely to their fellow traders. Launching a structured merchant referral program with fee discounts or cash-back incentives will empower our most loyal users to champion the platform across local trade associations and markets.

8. Deploy Dedicated Rescue Squads in High-Churn States While central commercial hubs enjoy churn rates as low as 12%, merchants in regions like Delta, Anambra, and Osun face turnover rates approaching 20%. Deploying dedicated regional account managers and local technical support teams directly into these markets will stabilize retention and address localized operational friction.

9. Use Payment Milestones to Cross-Sell Credit and Invoicing With over 5,400 merchants using Digital Payments as their front door, payment volume provides the perfect trigger for cross-selling. As soon as a merchant reaches consistent transaction milestones, automated prompts should introduce them to Working Capital Loans, Expense Cards, or Smart Invoicing to support their next stage of growth.

10. Establish Merchant Training Hubs Across Primary Corridors Lagos, Oyo, Ogun, Kano, and Abuja represent the vibrant heart of our platform's transaction volume. Setting up dedicated merchant support hubs and local training workshops in these commercial centers will strengthen community bonds, elevate bookkeeping literacy, and turn everyday trading corridors into self-sustaining growth engines.

Limitations

1. **Synthetic Dataset:** The dataset is synthetic and therefore does not represent actual customer behavior from a live fintech business. The results should be interpreted as an analytical demonstration rather than as evidence of actual market behavior.

2. **Unknown Root Causes for Failed Transactions:** The data records over 53,000 failed POS transactions and 34,000 general payment failures, but does not distinguish whether these errors stem from telco downtime, hardware defects, bank network outages, or user mistake.

3. **Lack of Cohort-Based Adoption Tracking:** An overall average of 220 days to adopt Moniebook is reported, but without monthly registration cohort tracking, it is impossible to verify whether recent onboarding improvements are speeding up this timeline for newer users.

4. **Unclear Churn Classification:** The metrics do not separate merchants who actively switched to a competing provider from solo micro-vendors whose businesses simply ceased operating.

5. **Missing In-Product Funnel Telemetry:** While high-level usage events and session totals are available, the dataset lacks step-by-step funnel data to show exactly where merchants abandon setups in complex tools like Moniebook, Smart Invoicing, or Business Payroll.

6. **Aggregated Financial Margins:** Customer Lifetime Value and cumulative profit figures are presented at a high level without itemized margin breakdowns across individual revenue streams, such as POS transaction fees, loan interest margins, or software fees.

Conclusion

This analysis shows that long-term customer value and business retention are driven by how deeply merchants integrate our tools into their daily routines, rather than payment processing alone. While digital payments bring most shop owners through our doors, long-term business resilience happens when merchants adopt operational tools. Most notably, **Moniebook serves as our strongest customer anchor**, merchants who keep their books on the platform represent less than one-fifth of all customer churn, and getting a merchant to use a bundle of **four core products** unlocks peak profitability.

However, three key roadblocks currently restrict platform growth:

- **The Onboarding Gap:** Merchants take an average of over seven months (220 days) before trying Moniebook.
- **Micro-Merchant Drop-off:** Solo vendors and neighborhood shops face a 17% drop-off rate, often finding tools too complex for a one-person business.
- **Countertop Checkout Friction:** Over 53,000 failed terminal payments cause immediate customer frustration at retail checkouts.

To protect revenue and build lasting merchant relationships, leadership should prioritize the following actions:

- **Shorten the Path to Daily Bookkeeping:** Re-engineer the first 30 days of the merchant journey with guided setup assistance and a simplified, single-tap cash tracking tool designed specifically for solo vendors.
- **Fix Checkout Reliability and Intervene Early:** Upgrade terminal network stability to prevent failed transactions at the checkout counter, and establish an early-warning system to reach out to merchants the moment their daily activity begins to stall.
- **Expand In-Person Field Presence:** Direct sales budgets toward on-the-ground field agents, partner bank branches, and structured merchant referral programs in key trading corridors like Lagos, Oyo, Ogun, Abuja, Rivers, and Kano while stationing dedicated support teams in vulnerable regions to stabilize retention.

Transitioning merchants from simple payment processors into fully supported business partners is our most effective strategy to stop customer loss, maximize long-term account value, and sustain profitable growth.

Appendix

Key Dax Measures

Click here to view

Recommended Dashboard Filters

Filter	Purpose
Month/Year	Analyze performance over time
Customer Segment	Compare customer groups
Industry	Analyze sector-specific behavior
State	Evaluate regional performance
City	Drill into local performance
Business Type	Compare business models
Acquisition Channel	Evaluate acquisition quality
Churn Status	Compare active, inactive and churned customers
Moniebook User	Compare adopters and non-adopters
Products Used	Compare single-product and multi-product customers

Drillthrough

Use drillthrough pages to investigate:

- Individual customers
- Products
- States
- Customer segments

Tooltips

Create custom tooltip pages for product and customer visuals so additional information can be displayed without overcrowding the dashboard.

Field Parameters

Allow users to switch between:

- Revenue
- Profit
- CLV
- Transaction

Top N Filters

Apply Top N filters to:

- Products
- Industries
- States
- Customers

Conditional Formatting

Use conditional formatting to highlight:

- High CLV
- High churn
- Low satisfaction
- High failed transactions
- High Moniebook adoption
- High-risk inactivity

Key Influencers

Use the Key Influencers visual to investigate factors associated with:

- Churn
- Moniebook adoption

D. Recommended Dashboard Structure

Page	**Primary Purpose**
Executive Overview	Overall business performance
Product Utilization	Product and feature performance
Moniebook Adoption	Adoption growth
Customer Segmentation	Customer segmentation and value
Retention and Churn	Retention & churn
CLV and Revenue Impact	Detailed customer investigation
Regional Performance	Geographic opportunities
Feature Usage and Stickiness	Product Usage

The Moniebook Adoption page should serve as the hero page because it connects product adoption with engagement, retention and CLV.
